

Generic programming your amateur radio.

Generic programming your amateur radio. Manufacturer _____ Model _____

Look up repeater frequency, _____ Tone _____ Offset “+” or “-“ etc.
(circle one)

Use the list on page 3 to enter all repeater and simplex frequency information.

As you find the information in your operator’s manual please fill in the page # for future references and fill in the actual steps to get each item set correctly.

Unfortunately the manufactures of these radios do not follow this sequence.

This is why this form was designed. Logical steps must be done in this order.

Now make a list of all the information you will need for each repeater you want to have programmed into your radio. Simplex radios will not need a tone or shift. List is on page 3.

Special ways this manual shows buttons, timing or other specific to your radio manual Page ____

Buttons =

HOLD = means hold that button down for the specified duration.

SEQUENCE= Hold button + another button together then, tap a 3rd button OR turn radio on.

1. **V**ariable **F**requency **O**scillator mode. Page 11

2. If needed, check the amount of frequency offset for the offset. Page ____

3. Enter the frequency of the repeater. Page ____

4. Turn on the tone/PL. Page ____

5. Set the tone frequency. Page ____

After you have turned on the tone you need to enter the particular tone frequency if required by the repeater you are programming.

Generic programming your amateur radio.

6. Turn on the offset if it is not done automatically.

Page ____

7. Change the direction of offset or (simplex, + or -) if it is not automatic.

Page ____

8. Memorize:

Page 19

9. Add name: if available and you want names.

Page ____

10. How to turn memorized name on and off.

Page ____

Screen picture, insert here for easy reference.

After you have mastered programming your radio by hand you usually can get a computer program and USB cable for that radio and save all the info on your computer, then load it into your radio. But don't forget how to do it manually in case you have to do it "on the fly". Do a separate sheet for each radio model you get. Remember "HAM" means Had A Lot of Money.

Page 3 of this document is for you to make a complete list of all the repeaters you plan on using on a regular basis. Recommended repeater data bases on-line
